

Safe Haven Emergency Lockdown Locksets

The quickest and most
secure way to protect
our children in their
classroom.

Safe Haven Emergency Lockdown Locksets

Ensure your students have a safe & secure learning environment throughout the facility with Securitech's safe haven instant lockdown solutions.

Life safety in schools and universities has come to mean more than adhering to code. With more than 70% of schools reporting at least one incident of violence and data reflecting that school shootings are on the rise, school lockdown solutions play a vital role in your school safety plan and securing students and staff in an emergency.

Teaming with architects, security consultants, school officials, and local authorities, Securitech has developed a specialized

series of door hardware solutions that are easy to operate, 100% code compliant, and save precious seconds in the event of a lockdown.

Keep students safe from intruders and make every room a safe room, from the building envelope to the interior, from lockdown of individual classrooms to remote multi-door locking. Ensure your students are secured in an emergency with Securitech's line of innovative, proven, and durable safe haven locking solutions.

Safe Haven Emergency Lockdown Locksets

SAFEBOLT™

Code-Compliant Barricade

The fastest way to barricade a room door while maintaining 100% code compliance. SafeBolt retrofits to existing cylindrical lever locks, making it affordable and easy-to-install.

QID™

Quick Intruder Deadbolt

Like the SafeBolt, QID allows rooms to be immediately secured by pressing the red button, projecting a deadbolt and locking the exterior lever. QID is a fully functioning mortise lock and is available in an electrified version.

LEXI™

Electric Lockdown

Enhanced safety and security in larger multi-door spaces. Control trim works with all major manufacturers exit devices and allows you to bring instant keyless lockdown to your otherwise mechanical hardware.

MULTI-BOLT™

Safety and Security in One Action

Multi-Bolt can function as a single point lock during the day, yet a single flip of the turnpiece provides multi-point protection at the end of the day or lockdown at any time.

ACCED™

Secured Entry & Safe Exit

For high occupancy spaces, ACCED allows primary entrance doors to be instantly and remotely locked with the single press of the lockdown station.

Door Security for Every Space

*Please note every school layout is different. The below are only suggestions for applications. The best applications and solutions are developed in collaboration with a school safety team.

Securitech's Safe Haven Emergency Lockdown Locksets are...

FAST:

Our solutions are designed to intuitively lockdown a room or space at the first sign of danger, saving vital time.

EASY:

With either the turn of a lever or the press of a button, a room is instantly secured. No scrambling for keys.

COMPLIANT:

100% life safety code and ADA-compliant, our solutions consistently meet and exceed standards.

SAFE:

You can always exit the room safely by pulling the lever down as you normally would – no one is ever locked in.

SAFEBOLT™

Retrofit, Code-Compliant Barricade Lock

SafeBolt is the fastest way to barricade a classroom door while maintaining 100% code compliance. Anyone in the room can press the red button and project a 1" stainless steel locking bolt to secure the room. SafeBolt retrofits to existing locks with a collar and adapter ring. Easily installed, SafeBolt is an affordable, easy way to boost security.

Easy to Operate

SafeBolt's highly visible red button operation allows for quick lockdown in emergencies. Exiting from the room is always possible with a single motion, retracting the bolt and latch. Staff and first responders can always enter by key.

Save Precious Time

One simple push of the red button assures the teacher that their door is properly secured. This one-step approach allows the teacher to instantly focus on taking measures to shelter in place or evacuating.

Cost Efficient

Keep existing cylindrical and mortise door locks and keying systems by mounting SafeBolt over the existing lock. With thru-bolted assembly and a metal marking template, SafeBolt is also easy to install.

Recognized Excellence

Winner of SIA's New Product Showcase Award, SafeBolt meets the Department of Homeland Security's #1 recommendation to quickly lockdown classroom doors from the outside without the use of a key. Fully code compliant.

Keyless Instant Lockdown

Code-Compliant

Superior Intruder Protection

Visual Indicators & Simple Use

QID™

Quick Intruder Deadbolt

QID is a full-featured mortise lock, available in classroom and storeroom functions, with the ability to lockdown at the press of a button. When pushed, the red button instantly projects a 1" stainless steel emergency deadbolt and locks the exterior vandal-resistant lever, securing the room and affording occupants vital time to focus on sheltering in place or evacuating. QID is also available in an electrified version for remote locking.

Reliable Protection

With its vandal resistant slip-clutch lever, a simple push of QID's red button throws a full 1" stainless steel deadbolt and locks the exterior lever, providing superior protection over a latch and allows for securing the door without having to search for a key or an external attachment.

Visible Safety

In addition to its bright red button, QID also contains a visual indicator window, notifying occupants that the door is deadbolted and the outside lever is locked in an emergency.

Accessible & Compliant

Although easily locked down, room occupants are never locked in. A single motion from the inside lever retracts both the deadbolt and latch. Fully code-compliant, staff and first responders can unlock from the outside using a key.

Innovative Access Control

Winner of Campus Safety's BEST Awards in "Locks and Door Hardware" and "Access Control, Lockdown, and Physical Security Equipment." Meets the Department of Homeland Security's #1 recommendation for quick classroom lockdown.

Keyless Instant Lockdown

Code-Compliant

Superior Intruder Protection

Visual Indicators & Simple Use

LEXI™ LOCKDOWN

Multi-Door Lockdown with The Press of a Button

The Lexi Lockdown system offers enhanced safety and security, allowing for exit devices in multi-door spaces to be instantly secured. While facilities may have exit devices from different manufacturers, with Lexi trim facilities can integrate access control systems and easily retrofit exit devices.

Strength & Durability

Lexi's heavy-duty stainless steel slip-clutch exterior lever handle stands up to abuse, will break away when forced, and is easily reset by lifting the lever. Optional additional protection can be added with 1" stainless steel deadbolt.

Enhance & Integrate

Lexi Lockdown series allows facilities to bring instant keyless lockdown and access control to otherwise mechanical hardware without having to replace exit devices, by simply adopting an electric exterior handle. Lexi trim works with all major manufacturers.

Quick, Remote Security

Save vital time without the use of keys to lock multiple doors. Simply press the red button above the exit device, the pendant, or the emergency lockdown button in case of an emergency. An LED light notifies occupants the room is secured.

Flexible Options

From locking stiles and touchbars, to retrofits and new construction, Lexi Lockdown series is completely customizable, and easy-to-install. For retrofits to existing doors, no cutting into the frame is required for an electric strike.

Keyless Instant Lockdown

Superior Intruder Protection

Visual Indicators & Simple Use

MULTI-BOLT™ 7000

From Latch Lock to Lockdown in One Action

Functioning as a single point lock or exit device during the day and in non-emergencies, Multi-Bolt's protection can be easily deployed with a single flip of the turnpiece, providing multi-point protection for lockdowns and lockouts, creating safe havens.

Simple, Code- Compliant Operation

The turnpiece throws (or engages) all deadbolts simultaneously, providing multi-point superior protection. Pushing exit bar or turning interior lever easily retracts all deadbolts and mortise latch in one motion, allowing free egress.

Multi-Point Protection

Fastening the door to the frame like a bank vault lock, the Multi-Bolt projects 1" stainless steel vertical and horizontal deadbolts, offering greater protection than a single latch or deadbolt. The exterior lever contains a vandal-resistant slip-clutch, and key override cylindrical.

Customizable

A wide variety of available options, including exterior trim, interior trim, touch bars, and additional bolting, meet almost any need. The lock body fits into standard ANSI mortise lock preparation.

Tested & Certified

Multi-Bolt meets FEMA 361 guidelines and is tested to National Storm Shelter/International Code Council (NSSA ICC) 500 standards, providing multi-point locking protection against powerful windstorms.

Code-Compliant

Superior Intruder Protection

Simple Operation

ACCED™

Access Control Exit Device

ACCED panic door hardware provides complete code-compliant functionality with free egress without special knowledge, while also securing your facility against unauthorized access.

UL Listed as panic door hardware, complete packages include exit device with electrified exterior trim. The built-in electrical solenoid system provides for the reliable locking and unlocking feature, and can include optional monitoring components, such as request to exit and key usage switches. ACCED can be further configured with multiple options to meet your facility's needs.

- Trims are available with fail-secure and fail-safe functionality.
- Packages with electro-magnetic locking, as well as control for existing electro-magnetic locks, are also available.
- Exit device options for ACCED include all types - rim, rim bolt, mortise, and surface and concealed vertical rod, all stainless steel devices.
- ACCED system can be augmented to include power supply or can work with existing power supply by other manufacturers, and is designed to eliminate inrush current.
- Fire Rated door hardware models are also available.

Established in New York City in 1983, Securitech® is an independent manufacturer of high-security door locks. Originally founded to create and produce multi-point door locks, Securitech quickly added automatic deadbolt locking and electric locking solutions to its catalog of products. All Securitech product designs are driven by the needs of the end-user, security director and architect.
