- Profile Cylinders Can't Be Wrenched Or Pulled Out
- Easy To Grasp Interior Thumbturn

How Does It Work?

Integra-Lock is an internally-mounted 4-point locking system. One turn of the knob or key sends steel deadbolts through the door and into the frame - bolting the door at four independent locations.

Three bolts retract with just one turn of the knob or key. The cylinder is protected from attack by a multi-layered guard plate, including a hardened steel layer.

Rods Travel Within the door to project the deadbolts at three sides. The Hinge Side Bolt extends into the frame as the door closes

Ideal For

- <> Individual Apartment Doors
- <> Safe Rooms
- <> Storage Rooms
- <> Super's Shops/ Tool Rooms
- <> High Security Guard Stations
- <> Embassy Or Gov't. Safe Rooms

MODELS

4200
